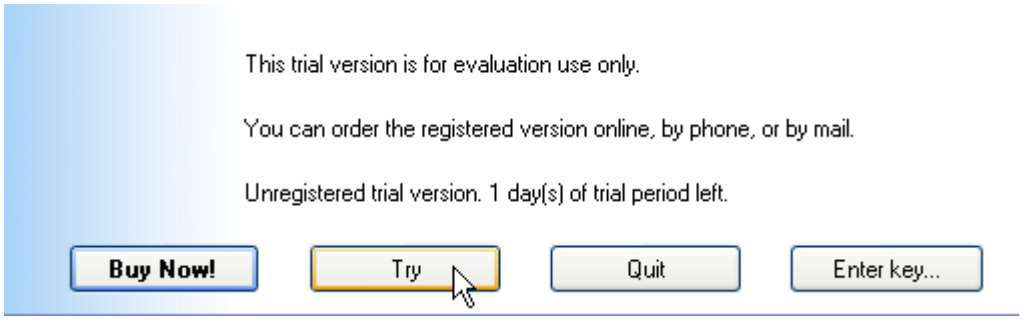
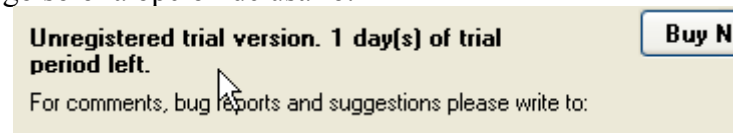
Hazaña de un asprotect by Apuromafo

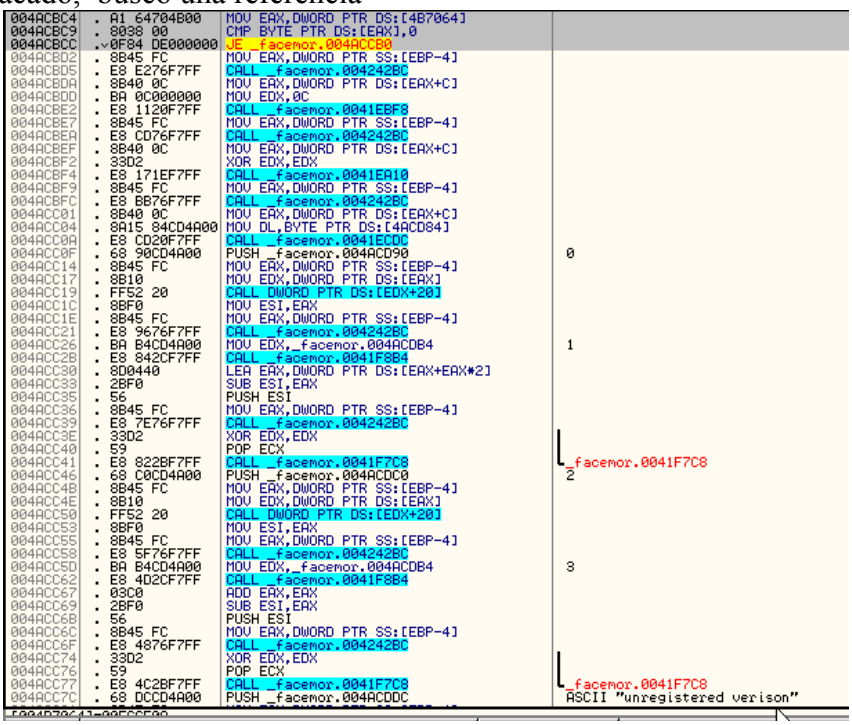


al pulsar try, pues tengo solo la opcion de usarlo.

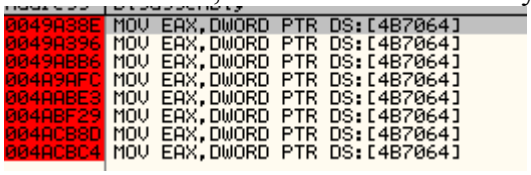


Uso el unpacker:
Victim ImageBase - 00400000
Victim EntryPoint - 00001000
13:41:46 - unhandled break at 0242700b..
13:41:46 - asprotect detected..
13:41:46 - loading modules..
13:41:46 - unhandled break at 0242700b..
13:41:46 - asprotect detected..
13:41:46 - loading modules..
luego
*vm(VM entry at)+scramle(ScrambledEntry at RVA:)+crc(Difference at RVA:)+Possible EnvelopeCheck
13:42:06 - saving C:\archivos de programa\archivo.exe

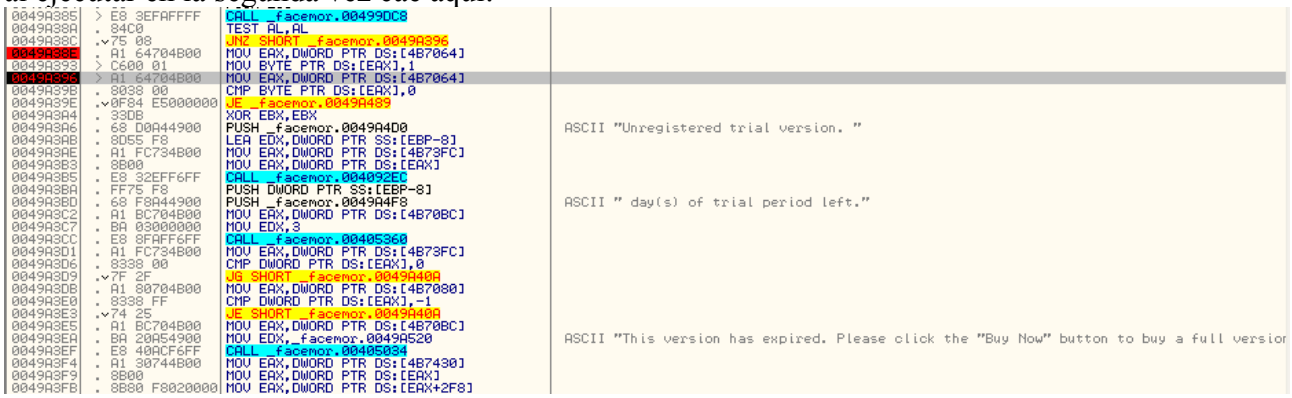
luego de desempacado, busco una referencia



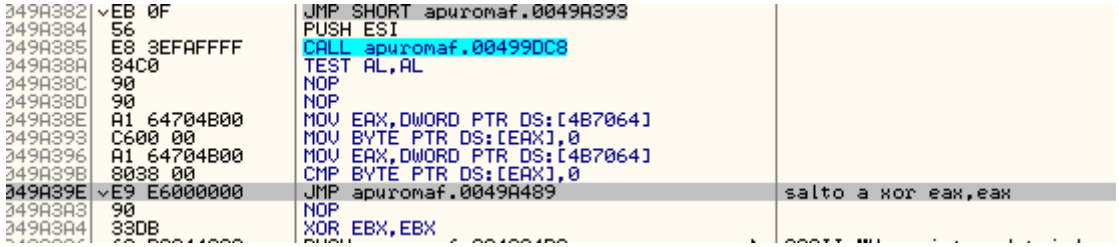
encontrando unregistered version veo un salto, coloco find references y coloco bp



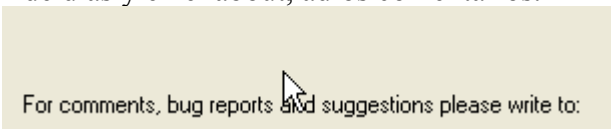
al ejecutar en la segunda vez cae aquí:



luego lo fuerzo:



adios nag , adios limitacion de dias y en el about, adios comentarios.



Los proximos chequeos son iguales, pero con el nop en el test al, escribe 1, luego no vuelve a reescribir este valor, por lo cual ejecutara registrado, hasta terminar el programa.
Programa caido, escrito del recuerdo,
Saludos APuromafo
